To use another program with the file, you'll just need to start that other program manually first, and then browse your computer for the particular file to open it. For example, you can open Microsoft Word and use its File > Open menu to open a DOC file that is normally associated with OpenOffice Writer, but doing so doesn't actually change the file association for DOC files as explained above.

How to Change File Associations in Windows

TIP. Text files, in particular, seem to come with all kinds of nonstandard (that is, unregistered) extensions. Rather than constantly setting up file types for these extensions or using the
