Design a networked solution to meet a particular situation with specific requirements M2 is the design of a network solution. Evidence could be diagrammatic with explanatory notes. The head office requires 5 networked PCs for their admin staff. The admin team is situated on the ground floor. You need to link the management computers and laptops to the same network so that they can share the internet connection and upload and share documents with the admin team ...

5. Construct a prototype network or a Pilot site for testing of network Design . During the network designing and implementation when you finish a new module of network or deploy the design to small site, before the full implementation, it is a best practico to test the new solution. This testing can be done in one of two ways: prototype or pilot.
