Bookmark File PDF

Steroids And Hormones

The main function of steroid hormones is to mediate certain functions, mechanisms, and actions in the body. These various functions depend on the type of steroid and those specific steroid functions. Some steroid hormones (androgens, corticosteroids, progestins, and estrogens) even have an impact on brain function.

Steroids And Hormones

Some athletes take a form of steroids — known as anabolic-androgenic steroids or just anabolic steroids — to increase their muscle mass and strength. The main anabolic steroid hormone produced by your body is testosterone. Testosterone has two main effects on your body: Anabolic effects promote muscle building.
